Q5. Multiple left rotations of the array

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an array of integers **A** and multiple values in **B**, which represents the number of times array A needs to be left rotated.  
Find the rotated array for each value and return the result in the form of a matrix where  $i^{th}$  row represents the rotated array for the  $i^{th}$  value in B.

Problem Constraints

$1 \leq \text{length of both arrays} \leq 2000$   $-10^9 \leq A[i] \leq 10^9$   $0 \leq B[i] \leq 2000$

Input Format

The first argument given is the integer array **A**.  
The second argument given is the integer array **B**.

Output Format

Return the resultant matrix.

Example Input

Input 1:  

A = [ 1, 2, 3, 4, 5]  
B = [ 2, 3]

  
Input 2:  

A = [ 5, 17, 100, 11]  
B = [ 1]

Example Output

Output 1:  

[ [ 3, 4, 5, 1, 2]  
[ 4, 5, 1, 2, 3] ]

  
Output 2:  

[ [ 17, 100, 11, 5] ]

Example Explanation

for input 1 -> B[0] = 2 which requires 2 times left rotations  
1: [2, 3, 4, 5, 1]  
2: [3, 4, 5, 1, 2]  
B[1] = 3 which requires 3 times left rotation  
1: [2, 3, 4, 5, 1]  
2: [3, 4, 5, 1, 2]  
2: [4, 5, 1, 2, 4]
