Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

You are given an integer **T** (number of test cases). You are given array **A** and an integer **B** for each test case. You have to tell whether **B** is present in array **A** or not.

Problem Constraints

1 <= **T** <= 10

1 <= **|A|** <= 10⁵

1 <= **A[i]**, **B** <= 10⁹

Input Format

First line of the input contains a single integer **T**.

Next, each of the test case consists of 2 lines:

- First line begins with an integer **|A|** denoting the length of array, and then **|A|** integers denote the array elements.
- Second line contains a single integer **B**

Output Format

For each test case, print on a separate line 1 if the element exists, else print 0.

Example Input

Input 1:

1
5 4 1 5 9 1
5

Input 2:

1
3 7 7 2
1

Example Output

Output 1:

1

Output 2:

0

Example Explanation

Explanation 1:

B = 5 is present at position 3 in **A**

Explanation 2:

B = 1 is not present in **A**.

Java7 (Open-Jdk-1.7.0)

1 import java.util.Scanner;
2 import java.util.*;
3
4 public class Main
5 {
6 public static void main(String[] args)
7 {
8 Scanner readTestCase = new Scanner(System.in);
9 Scanner readString = new Scanner(System.in);
10 Scanner readKey = new Scanner(System.in);
11
12 int T = readTestCase.nextInt();
13
14 for(int k = 1; k <= T; k++) //For each test case
15 {
16 System.out.println(); // Clear the output
17 String line2 = readString.nextLine();
18 System.out.println(); // Clear the output
19 int key = readKey.nextInt();
20
21 /*Convert String to Array*/
22 //Step 1 : Split the given string into array
23 String[] userInputStringArray = line2.split(" ");
24
25 //Step 2 : Iterate over the array and check if the element is present or not
26 boolean found = false;
27 for(int i = 0; i < userInputStringArray.length; i++)
28 {
29 if(Integer.parseInt(userInputStringArray[i]) == key)
30 {
31 found = true;
32 break;
33 }
34 }
35 System.out.println(found ? 1 : 0);
36 }
37 }
38 }
