Q3. Subarray with least average

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an array of size **N**, find the subarray of size **K** with the least average.

Problem Constraints

1<=k<=N<=1e5
-1e5<=A[i]<=1e5

Input Format

First argument contains an array A of integers of size N.
Second argument contains integer k.

Output Format

Return the index of the first element of the subarray of size k that has least average.
Array indexing starts from 0.

Example Input

Input 1:
A=[3, 7, 90, 20, 10, 50, 40]
B=3
Input 2:
A=[3, 7, 5, 20, -10, 0, 12]
B=2

Example Output

Output 1:
3
Output 2:
4

Example Explanation

Explanation 1:
Subarray between indexes 3 and 5
The subarray {20, 10, 50} has the least average
among all subarrays of size 3.
Explanation 2:
Subarray between [4, 5] has minimum average
