Q2. Good Pair

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an array **A** and an integer **B**. A **pair**(i, j) in the array is a good pair if $i \neq j$ and $(A[i] + A[j] == B)$. Check if any good pair exist or not.

Problem Constraints

$1 \leq A.size() \leq 10^4$

$1 \leq A[i] \leq 10^9$

$1 \leq B \leq 10^9$

Input Format

First argument is an integer array A.

Second argument is an integer B.

Output Format

Return 1 if good pair exist otherwise return 0.

Example Input

Input 1:

A = [1, 2, 3, 4]

B = 7

Input 2:

A = [1, 2, 4]

B = 4

Input 3:

A = [1, 2, 2]

B = 4

Example Output

Output 1:

1

Output 2:

0

Output 3:

1

Example Explanation

Explanation 1:

(i, j) = (3, 4)

Explanation 2:

No pair has sum equal to 4.

Explanation 3:

(i, j) = (2, 3)
