Q1. Little Pony and Maximum Element

</>

🟢 Solved

🐼

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Little Pony is given an array, **A**, of **N** integers. In a particular operation, he can set any element of the array equal to **-1**.
He wants your help in finding out the minimum number of operations required such that the maximum element of the resulting array is **B**. If it is not possible, then return **-1**.

Problem Constraints

1 <= |A| <= 10⁵
1 <= A[i] <= 10⁹

Input Format

The first argument of input contains an integer array, A.
The second argument of input contains an integer, B.

Output Format

Return an integer representing the answer.

Example Input

Input 1:
A = [2, 4, 3, 1, 5]
B = 3
Input 2:
A = [1, 4, 2]
B = 3

Example Output

Output 1:
2
Output 2:
-1

Example Explanation

Explanation 1:
We need to remove 4 and 5 to make 3 the biggest element.
Explanation 2:
As 3 doesn't exist in the array, the answer is -1.

See Expected Output

Java7 (Open-Jdk-1.7.0)

1 import java.util.*;
2
3 public class Solution {
4
5 public static void main(String[] args) {
6
7 Scanner sc = new Scanner(System.in);
8 String line = sc.nextLine();
9 int key = sc.nextInt();
10 String[] inputInString = line.split(" ");
11 int[] inputInInt = new int[inputInString.length];
12
13 for(int i = 0; i < inputInString.length; i++) {
14 inputInInt[i] = Integer.parseInt(inputInString[i]);
15 }
