Problem Description

You are given an integer array **A**. You have to find the second largest element/value in the array or report that no such element exists.

Problem Constraints

1 ≤ |A| ≤ 10⁵

0 ≤ A[i] ≤ 10⁹

Input Format

The first argument is an integer array **A**.

Output Format

Return the second largest element. If no such element exist then return -1.

Example Input

Input 1:

A = [2, 1, 2]

Input 2:

A = [2]

Example Output

Output 1:

1

Output 2:

-1

Example Explanation

Explanation 1:

First largest element = 2

Second largest element = 1

Explanation 2:

There is no second largest element in the array.

Expected Output

Provide sample input and click run to see the correct output for the provided input. Use this to improve your problem understanding and test edge cases

Arg 1: An Integer Array, For e.g [1,2,3]
