Q2. Closest MinMax

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an array **A**, find the size of the smallest subarray such that it contains at least one occurrence of the maximum value of the array and at least one occurrence of the minimum value of the array.

Problem Constraints

1 <= |A| <= 2000

Input Format

First and only argument is vector **A**

Output Format

Return the length of the smallest subarray which has at least one occurrence of minimum and maximum element of the array

Example Input

Input 1:
A = [1, 3]

Input 2:
A = [2]

Example Output

Output 1:
2

Output 2:
1

Example Explanation

Explanation 1:
Only choice is to take both elements.

Explanation 2:
Take the whole array.

See Expected Output

Java 8 (Oracle-Jdk-1.8)

```
1 import java.util.Scanner;
2 import java.util.ArrayList;
3 import java.util.Collections;
4
5 /*
6  * Optimizing brute force approach to
7  */
8 public class Solution
9 {
10     public static void main(String[] args)
11     {
12         Scanner sc = new Scanner(System.in);
13         String line1 = sc.nextLine();
14         String[] strings = line1.split(" ");
15
16         int N = strings.length;
17         ArrayList<Integer> input = new ArrayList<>();
18
19         for(String str : strings)
20         {
21             input.add(Integer.parseInt(str));
22         }
23
24         // Custom Input print (value/input)
25     }
26 }
```
