Q1. Special Subsequences "AG"

</>

Solved

🐼

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

You have given a string **A** having **Uppercase English letters**.
You have to find how many times subsequence **"AG"** is there in the given string.
NOTE: Return the answer modulo $10^9 + 7$ as the answer can be very large.

Problem Constraints

$1 \leq \text{length}(A) \leq 10^5$

Input Format

First and only argument is a string A.

Output Format

Return an integer denoting the answer.

Example Input

Input 1:
A = "ABCGAG"
Input 2:
A = "GAB"

Example Output

Output 1:
3
Output 2:
0

Example Explanation

Explanation 1:
Subsequence "AG" is 3 times in given string
Explanation 2:
There is no subsequence "AG" in the given string.

See Expected Output

Java 8 (Oracle-Jdk-1.8)

```
12  }
13  }
14
15  public static int solve(String str)
16  {
17      int countG = 0;
18      int answer = 0;
19      int N = str.length();
20
21      for(int index = N - 1; index >= 0; index--)
22      {
23          if(str.charAt(index) == 'G')
24          {
25              countG++;
26          }
27          else if(str.charAt(index) == 'A')
28          {
29              answer = (answer + countG) % 1000000007;
30          }
31      }
32      return answer;
33  }
```
