Q1. Single Number III

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

[Get help from TA.](#)

Problem Description

Given an array of positive integers **A**, two integers appear only once, and all the other integers appear twice.
Find the **two integers that appear only once**.

Problem Constraints

 $2 \leq |A| \leq 100000$ $1 \leq A[i] \leq 10^9$

Input Format

The first argument is an array of integers of size **N**.

Output Format

Return an array of two integers that appear only once.

Example Input

Input 1:

A = [1, 2, 3, 1, 2, 4]

Input 2:

A = [1, 2]

Example Output

Output 1:

[3, 4]

Output 2:

[1, 2]

Example Explanation

Explanation 1:

3 and 4 appear only once.

Explanation 2:

1 and 2 appear only once.

[See Expected Output](#)

Java 8 (Array Support)

```
54         if(A[i] != 0)
55             {
56                 ans[j] = A[i];
57                 j++;
58             }
59     }
60
61     Arrays.sort(ans);
62
63     return ans;
64 }
65 }
```

Test Output Wrong Answer!

Your submission failed for the following input

A : [186, 256, 102, 377, 186, 377][Test As Custom Input](#)

The expected return value:
