Q1. Counting Subarrays Easy

Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an array **A** of **N** non-negative numbers and a non-negative number **B**, you need to find the **number of subarrays in A with a sum less than B**. We may assume that there is no overflow.

Problem Constraints

1 <= N <= 10³

1 <= A[i] <= 1000

1 <= B <= 10⁷

Input Format

First argument is an integer array **A**.

Second argument is an integer **B**.

Output Format

Return an integer denoting the **number of subarrays in A having sum less than B**.

Example Input

Input 1:

A = [2, 5, 6]

B = 10

Input 2:

A = [1, 11, 2, 3, 15]

B = 10

Example Output

Output 1:

4

Output 2:

4

Example Explanation

Explanation 1:

The subarrays with sum less than B are {2}, {5}, {6} and {2, 5},

Explanation 2:

The subarrays with sum less than B are {1}, {2}, {3} and {2, 3}

See Expected Output

Java 8 (Array Support)

```
currentSubArraySum = 0;
for(int j = i; j < N; j++)
{
    currentSubArraySum = currentSubA

    if(currentSubArraySum < limit)
    {
        count++;
    }else{
        break;
    }

    if(i == 0 && j == (N - 1) && cur
    {
        return (N * (N + 1)) / 2;
```
