Solved

Stuck somewhere?

Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

You are given an integer array **C** of size **A**. Now you need to find a subarray (contiguous elements) so that the sum of contiguous elements is maximum. But the sum must not exceed **B**.

Problem Constraints

1 <= A <= 10³
1 <= B <= 10⁹
1 <= C[i] <= 10⁶

Input Format

The first argument is the integer A.
The second argument is the integer B.
The third argument is the integer array C.

Output Format

Return a single integer which denotes the maximum sum.

Example Input

Input 1:
A = 5
B = 12
C = [2, 1, 3, 4, 5]
Input 2:
A = 3
B = 1
C = [2, 2, 2]

Example Output

Output 1:
12
Output 2:
0

Example Explanation

Explanation 1:
We can select {3,4,5} which sums up to 12 which is the maximum possible sum.
Explanation 2:
All elements are greater than B, which means we cannot select any subarray.
Hence, the answer is 0.
