Q3. Leaders in an array

Solved

Stuck somewhere?
Ask for help from a TA and get it resolved.

Get help from TA.

Problem Description

Given an integer array **A** containing **N** distinct integers, you have to find all the **leaders** in array **A**.

An element is a leader if it is strictly greater than all the elements to its right side.

NOTE:The rightmost element is always a leader.

Problem Constraints

1 <= N <= 10⁵

1 <= A[i] <= 10⁸

Input Format

First and only argument is an integer array **A**.

Output Format

Return an integer array denoting all the **leader elements** of the array.

NOTE: Ordering in the output doesn't matter.

Example Input

Input 1:

A = [16, 17, 4, 3, 5, 2]

Input 2:

A = [1, 2]

Example Output

Output 1:

[17, 2, 5]

Output 2:

[2]

Example Explanation

Explanation 1:

Element 17 is strictly greater than all the elements on the right side to it.
Element 2 is strictly greater than all the elements on the right side to it.
Element 5 is strictly greater than all the elements on the right side to it.
So we will return this three elements i.e [17, 2, 5], we can also return [2, 5, 17] or [5, 2, 17] or any other ordering.

Explanation 2:

Only 2 the rightmost element is the leader in the array.

See Expected Output

Java 8 (Oracle-Jdk-1.8)

```
20
21
22     public static ArrayList<Integer> solve(
23     {
24         int n = input.size();
25         ArrayList<Integer> output = new ArrayList<>();
26         int max = input.get(n - 1);
27
28         output.add(input.get(n - 1));
29         for(int i = n - 2; i >= 0; i--)
30         {
31             if(max < input.get(i))
32             {
33                 max = input.get(i);
34                 output.add(max);
35             }
36         }
37     }
38 }
```
